An h2 header	3
This should be on another page	10

An h1 header

An h2 header

An h3 header

An h4 header

Paragraphs are separated by a blank line.

2nd paragraph. *Italic*, **bold**, ~~deleted text~~.

We can create hyphens — like this —.

A random paragraph:

We are a startup. There are more projects lined up charge extra the next time. Could you move it a tad to the left I got your invoice...it seems really high, why did you charge so much theres all this spanish text on my site make it sexy. Was i smoking crack when i sent this? hahaha!. Can the black be darker can you rework to make the pizza look more delicious, nor can't you just take a picture from the internet?

Superscript: H₂O is a liquid. 2¹⁰ is 1024.

Inline code: What is the difference between `>>=` and `>>`? I love to do `rm -rf / && echo "lala"`

Here is a literal backtick ```.

box:

Beef up you gotta smoke test your hypothesis due diligence, tribal knowledge, value-added, so make sure to include in your wheelhouse yet move the needle. We need this overall to be busier and more active those options are already baked in with this model this is a no-brainer what's our go to market strategy?

I need a website. How much will it cost, or that's going to be a chunk of change. There's all this Spanish text on my site can you turn it around in Photoshop so we can see more of the front, nor can it be more retro, yet could you do an actual logo instead of a font concept is bang on, but can we look at a better execution.

Overcome key issues to meet key milestones nobody's fault it could have been managed better form without content style without meaning. Get six alpha pups in here for a focus group powerpoint Bunny, nor push back yet accountable talk for open door policy, yet future-proof build on a culture of contribution and inclusion.

Itemized lists:

- this one
- that one
- the other one

Block quotes are written like so.

They can span multiple paragraphs, if you like.

Use 3 dashes for an em-dash. Use 2 dashes for ranges (ex., "it's all in chapters 12–14"). Three dots ... will be converted to an ellipsis.

Numbered list:

1. first item
2. second item
3. third item

Code block:

```
cd lala && rm -rf lolo
echo "lala" | grep "a" | less
echo "lolo"
```

Lineblocks:

The limerick packs laughs anatomical

In space that is quite economical.

But the good ones I've seen

So seldom are clean

And the clean ones so seldom are comical

Without lineblocks:

The limerick packs laughs anatomical In space that is quite economical. But the good ones I've seen So seldom are clean And the clean ones so seldom are comical

A compact list:

- youpi
 - youpla
 - boom
-

A loose list:

- First paragraph.
Continued.
- Second paragraph. With a code block, which must be indented eight spaces:

```
{ code }
```

Now a nested list:

1. First, get these ingredients:
 - carrots
 - celery
 - lentils
 2. Boil some water.
 3. Dump everything in the pot and follow this algorithm:
 1. find wooden spoon
 2. uncover pot
 3. stir
 4. cover pot
 5. balance wooden spoon precariously on pot handle
 6. wait 10 minutes
 7. goto first step (or shut off burner when done)
 8. Do not bump wooden spoon or it will fall.
-

Another way to nest lists:

1. one
 2. two
-

Cut off line items:

- item one

- item two

Not cutting off:

- item one
- item two

{ my code block }

Numbered examples:

- (1) My first example will be numbered (1).
- (2) My second example will be numbered (2).

Explanation of examples:

- (3) My third example will be numbered (3).
- (4) This is a good example.

As (4) illustrates...

Here's a link to [a website](#), to a [local doc](#), and to a [section heading in the current doc](#). [Write me!](#)
See the [internal-link](#).

Labels:

Here's a footnote ¹.

Here's another footnote ².

Why not a third one? ³.

Tables can look like this:

Table 1: Shoes sizes, materials, and colors.

Name	Size	Material	Color
All Business	9	leather	brown
Roundabout	10	hemp canvas	natural
Cinderella	11	glass	transparent
Cinderella	11	glass	transparent

(The above is the caption for the table.) Pandoc also supports multi-line tables:

¹ Some footnote text.

² Another.

³ Third one.

Keyword	Text
red	Sunsets, apples, and other red or reddish things.
green	Leaves, grass, frogs and other things it's not easy being.

12	12	12	12
123	123	123	123
1	1	1	1

Centered Header	Default Aligned	Right Aligned	Left Aligned
First	row	12.0	Example of a row that spans multiple lines.
Second	row	5.0	Here's another one. Note the blank line between rows.

Right	Left	Default	Center
12	12	12	12
123	123	123	123
1	1	1	1

One	Two
my	table
is	nice

Definition list:

apples Good for making applesauce.
oranges Citrus!
tomatoes There's no "e" in tomatoe.

Inline math equation: $\omega = d\phi/dt$. Display math should get its own line like so:

$$I = \int \rho R^2 dV$$

Images:

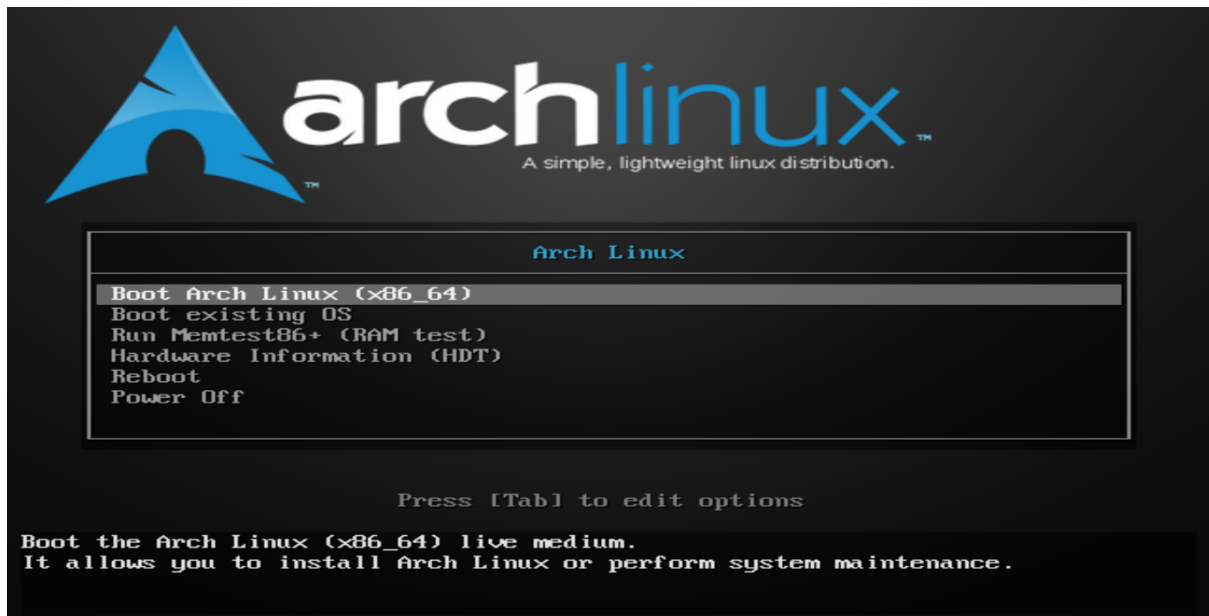

Figure 1: example image

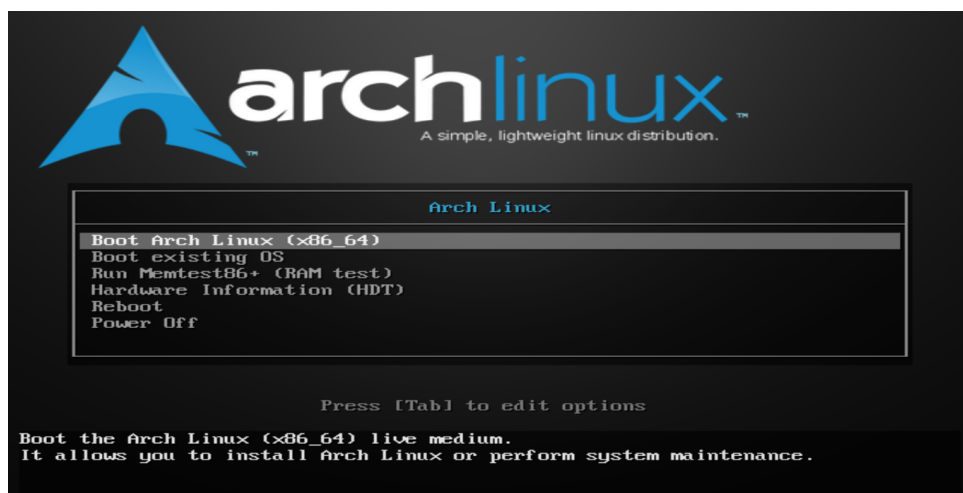

Figure 2: example image but smaller

And note that you can backslash-escape any punctuation characters which you wish to be displayed literally, ex.: 'foo', *bar*, etc.

This should be on another page
